

RECYFIX®HICAP®

Drainage system for extreme conditions with high hydraulic requirements.

RECYFIX®HICAP®

Drainage system for extreme conditions with high hydraulic requirements.

1 Requirement

Drainage system for extreme conditions with

- high hydraulic requirements
- high loads
- large areas
- ailing sewer systems

3 Solution

Special features of RECYFIX HICAP:

- drainage and retention in one component
- large selection of nominal widths
- for all loading classes and all common road surface finishes
- less manholes and outlets
- provides a uniform visual appearance also in large projects
- no separate gratings
- no expensive pipe installations required
- high hydraulic capacity
- easy to maintain

2 Application areas

- Parking areas
- Supermarkets/shopping centres
- Pedestrian areas
- Airports
- Industrial estates
- container terminals
- Ports
- Circuits and test tracks

Airport Newquay, England

Renovation city center Szentendre, Hungary

Toyota test track Brussels, Belgium

Industrial estate, England

Teesport Container Terminal, UK

----------------	----------------	------------	----------------	---------------	-------------	----------------

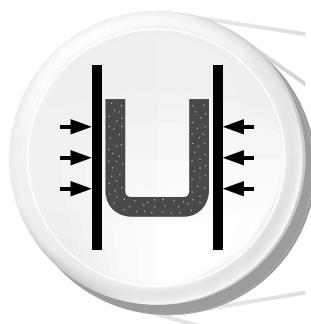

The benefits of RECYFIX®HICAP® F channels

Fast & easy installation

- easy to handle and install
- integrated tongue and groove joint
- installation in one component
- less pipe installations

= **Cost saving**

Top inlet made of high-quality ductile iron and channel body from sustainable PE-PP

- material: ductile iron EN GJS-500-7
- 23 times higher tensile strength and 9 times higher compressive strength as polymer concrete
- various gratings
- surfaces extreme robust and indestructible

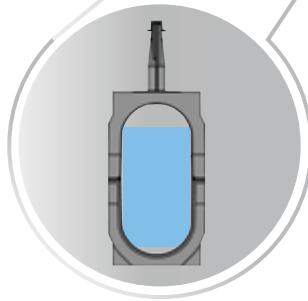

= **Safety**

Channel body made from sustainable material

- material from 100 % recycled PE-PP
- very light and unbreakable material

= **Security**

Large retention volume

- drainage and retention in one component
- high capacity and back-pressure capacity due to a variety of nominal widths from 100 to 680 mm
- less trash boxes and pipe connections required

= **Flexibility/Security**

Link&Lock facilitates the installation

- innovative linking system for ductile iron tops
- easy and quick alignment of each channel metre

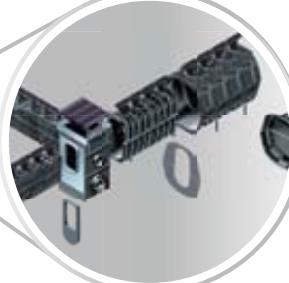

= **Cost savings**

Individual Solutions

- possible radial installation
- Cable and pipe installations can be laid through funnel
- ductile Iron top on the surface can be interrupted while the channels on the underground continue

= **Flexibility**

Various Connecting Possibilities

- end cap with canal connection option
- simple possibility for preparation of corner and T-connections
- End cap adapter for connecting the next nominal width
- Various options for pipe connections exist on the channel

= **Flexibility**

High stability

- designed for extreme conditions, especially for applications in heavy road traffic up to class F 900

= **Safety**

Wide range

- various gratings in KTL
- uniform design also in different nominal widths

= **Flexibility**

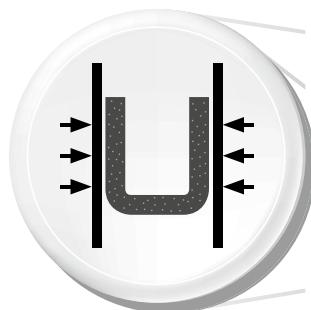

The benefits of RECYFIX®HICAP® G channels

Fast & easy installation

- easy to handle and install
- integrated tongue and groove joint
- installation in one component
- less pipe installations

= Cost saving

Top inlet made of high-quality ductile iron and channel body from sustainable PE-PP

- material: ductile iron EN GJS-500-7
- 23 times higher tensile strength and 9 times higher compressive strength as polymer concrete
- surfaces extreme robust and indestructible

= Safety

Channel body made from sustainable material

- material from 100 % recycled PE-PP
- very light and unbreakable material

= Security

Large retention volume

- drainage and retention in one component
- high capacity and back-pressure capacity due to a variety of nominal widths from 100 to 300 mm
- less trash boxes and pipe connections required

= Flexibility/Security

Direct connection for all surfaces

- for all kind of surface layers
- direct visible connection to ductile iron tops
- no concrete stretcher visible

= **Flexibility**

Individual Solutions

- possible radial installation
- ductile Iron top on the surface can be interrupted while the channels on the underground continue

= **Flexibility**

Various Connecting Possibilities

- end cap with canal connection option
- simple possibility for preparation of cornerand T-connections
- End cap adapter for connecting the next nominal width
- Various options for pipe connections exists on the channel

= **Flexibility**

High stability

- designed for extreme conditions, especially for applications in heavy road traffic up to class F 900

= **Safety**

RECYFIX®HICAP®

Drainage system for extreme conditions with high hydraulic requirements.

RECYFIX®HICAP® channels drain the largest airport in Europe

Airport modernisation for the A 380 using RECYFIX®HICAP®

Heathrow airport in London is Europe's largest airport and the third largest in the world. One main reason for extending the air traffic surfaces was the introduction of the Airbus A 380. The drainage channels must be able to stand up not only to the new super-aircraft, but also to the dimensions of the new aircraft tugs: they weigh about 80 tonnes and, like the aircraft itself, turn directly on the drainage channels.

Long-term durability and lasting safety for service under extreme conditions:

- cost savings due to long lengths and few sewage pipe connection points
- very large drainage capacity due to large nominal width of 150 to 300 mm
- robust and rugged material at the surface: ductile iron EN-GJS-500-7
- low weight, easy installation
- product made of recycled PE-PP meets sustainability criteria

1
■ RECYFIX HICAP channel 100 in PE-PP with inlet adapter and integrated ductile iron grating

2
■ The connector is used to connect to the next nominal size up.

3
■ RECYFIX HICAP channel 150 in PE-PP with inlet adapter and integrated ductile iron grating

4
■ T-connector for connecting to branches

5
■ RECYFIX HICAP channel 200 in PE-PP with inlet adapter and integrated ductile iron grating

6
■ RECYFIX HICAP channel 300 in PE-PPc with inlet adapter and integrated ductile iron grating

7
■ RECYFIX HICAP channel 680 in PE-PP with inlet adapter and integrated ductile iron grating

8
■ End cap 100

9
■ End cap 680 with canal connection option

10
■ Trash box with galvanised angle housing and boltless-locking system SIDE-LOCK, Ductile iron grating class F 900 and 2-sided pipe connection possibility. Could be used for step from one to another nominal size on every position of the channel run.

RECYFIX®HICAP®

Drainage system for extreme conditions with high hydraulic requirements.

Sample calculation:

RECYFIX®HICAP® F with transverse web grating

The hydraulic advantages of RECYFIX HICAP channels can be demonstrated by the following calculation:

Inlet capacity of a transverse web grating, determined at Prague Technical University:

4,0 l/s per metre

frequently occurring yield from rain events:

150 l/s per hectare

$$150 \text{ l/s ha} = 0,015 \text{ l/s m}^2$$

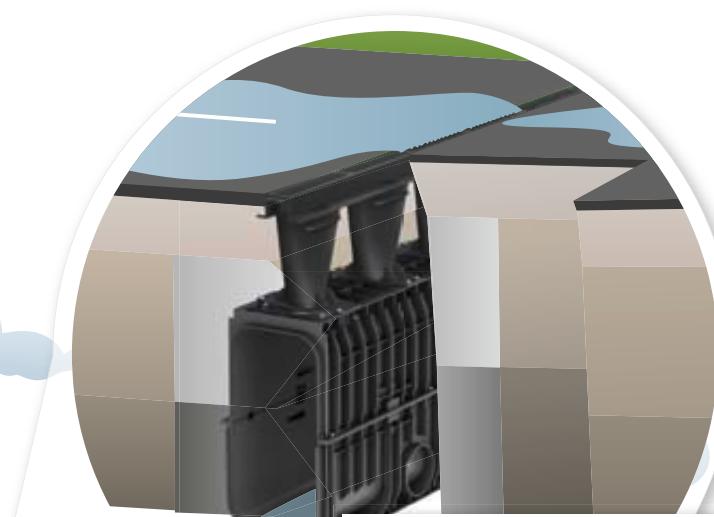

$$\frac{4,0 \text{ l/s m}}{0,015 \text{ l/s m}^2} = 266,67 \text{ m}$$

Result of this example:

1 m RECYFIX HICAP channel with transverse web grating can discharge the rainwater from 266,67 m² when the yield is 150 litres per second and hectare.

Rain event
150 l/s per hectare

**Flow capacity of a
transverse web grating**
4 l/s per metre

Inlet capacity of RECYFIX®HICAP® F

(applies to all nominal widths)

Grating	Grating inlet capacity in l/s*
Longitudinal webs	3,80
Transverse webs	4,00
Open slot	3,60

* measured with a water head of 10 mm
