

SPORTFIX® Soft kerbs

Used for edging sand pits, sand traps, shot-putting facilities and other sports areas. Rubber cushioned capping minimises risk of injury to athletes.

At a glance

- ✓ Available in black and white
- ✓ Different heights and corner elements available
- ✓ Rubber cushion made of EPDM and air cushions inside to minimise the risk to athletes

SPORTFIX® Soft kerbs

SPORTFIX Soft kerbs

SPORTFIX soft kerbs with rubber padding are used as boundaries for jumping pits and sand pits, and to define outside edge of a running track. They are also used for permanent delineation of separate areas in sports grounds. The rubber padding protects sportsmen and children from serious injury if they fall. SPORTFIX soft kerbs are made from fibre-reinforced concrete with a 60 mm wide and 30 mm high white or black rubber padding made from ethylene propylene diene monomer

(EPDM). This material is temperature resistant from - 30 °C to + 100 °C and extremely flexible. The padding considerably reduces the risk of injury to sportsmen and children. SPORTFIX soft kerbs are available in heights ranging from 200 to 400 mm and can be shortened if required. Matching angle pieces ensure precision corner joints.

Soft kerbs

SPORTFIX® Soft kerbs for shot put areas

SPORTFIX Soft kerbs for shot put areas

For shot put areas we recommend wider SPORTFIX soft kerbs. The design and materials are the same as the soft kerbs for jumping pits and sand pits. The SPORTFIX soft kerb rubber padding for shot areas is 100 mm wide and 50 mm high. The 250 mm high soft kerb is available in white or black.

Soft kerbs for shot put areas
